

An extensive range of fish trays from Holfeld Why cast your net wider?

Standard Features

- 1 Superior rigidity and impact strength
- 2 Reduced A-B denest facility enabling optimal warehouse storage, excellent palletisation and reduced truck movements on the roads
- 3 Integral ribs to withstand the challenges of modern packhouse environments

Padless Trays

With Holsorb the manufacturer has removed the need for padding offering processors potentially fewer changeovers and therefore a reduced cost base. Holsorb removes the need for a pad by using clever wells, which absorb & retain excess moisture. Another key environmental benefit because less material is used in the manufacture of the tray.

- One of the most comprehensive ranges of seafood trays available
- Minimum 65% recycled PET or PP – all recyclable - diverting from landfill
- Designed to meet the challenges of modern packing environments now and in the future
- Low carbon trays. Reduced a-b denest for optimal palletisation, storage & less road journeys
- Up to 28 stock colours to choose from - with customised colours on request
- Strong and lightweight. Robust design for impact strength in transit
- Padded or padless trays with Holsorb in the base reducing material usage
- Attractive, on shelf designs offering product clarity
- Cost effective processes

Environmental issues are pre-eminent factors in the fishing and processing industries.

The Holfeld 'C' & 'S' fish tray ranges together with their crustacean range compliment the sustainable reputation of the sector. Holfeld was the first packaging manufacturer to offer packaging with at least 85% post consumer recyclate in its blend. This measure of recyclate significantly reduces the use of virgin material and the manufacturer's reliance on non-renewable sources.

The trays are ribbed, providing the strength needed to withstand the demands of modern packing lines, without compromising their aesthetic appeal. All the trays offer an enhanced a-b denest facility delivering a low carbon solution by optimising on warehousing and storage, palletisation requirements and reducing the number of truck deliveries.

C2 Range

SPECIFICATION

Code	C2/20	C2/28	C2/32	C2/38	C2/45	C2/50	C2/60	C2/70
