SIZES AVAILABLE:

310 x 148 x 40mm	310 x 148 x 65mm	310 x 148 x 75mm
------------------	------------------	------------------

- One of the most comprehensive ranges of fish and crustacean trays available
- Minimum 85% recycled PET or PP – all recyclable - diverting from landfill
- Designed to meet the challenges of modern packing environments now and in the future
- Low carbon trays. Reduced a-b denest for optimal palletisation, storage & less road journeys
- Up to 28 stock colours to choose from - with customised colours on request
- Strong and lightweight. Robust design for impact strength in transit
- Padded or padless trays with Holsorb in the base reducing material usage
- Attractive, on shelf designs offering product clarity
- Cost effective processes

Sustainable practices throughout the supply chain from the catch to the plate

Holfeld know that environmental issues are pre-eminent factors in the fishing and processing industries.

The Holfeld 'C' & 'S' fish tray ranges together with their crustacean range compliment the sustainable reputation of the sector. Holfeld was the first packaging manufacturer to offer packaging with at least 85% post consumer recyclate in its blend. This measure of recyclate significantly reduces the use of virgin material and the manufacturer's reliance on non-renewable sources.

The trays are strategically ribbed confronting the challenges of modern packing lines without compromising on their aesthetic appearance demonstrating good on-shelf product visibility and appeal. All the trays offer an enhanced a-b denest facility delivering a low carbon solution by optimising on warehousing and storage, palletisation requirements and reducing the number of truck deliveries.

A leading range of fish packaging meeting environmental and low carbon expectations

The 'C' range.

Available in recycled PET or PP. An ideal range of crate fit trays for the fish processing sector strong and robust purposely manufactured to meet the challenging packing environments now and in the future. This range comprises the C2, 3, 4, 5 & 7 with depths ranging from shallow to deep 32mm to 70mm.

The 'S' range.

Ideal crate fit in recycled PP or PET with at least 85% post consumer recyclate. Padded in line to be highly cost effective. Some of the trays have Holsorb, an integral feature in the base that eliminates the use of a pad. As with the 'C' range a-b denesting facilitates storage, palletisation and reduces truck movements. Available in depths from shallow to deep, 30mm to 80mm.

The Crustacean Prawn range

All the environmental and low carbon advantages of the Holfeld fish tray range in sizes 0.5kg, 1kg and Prawn MK3.

- 1 Superior rigidity and impact strength
- 2 Reduced A-B denest facility enabling optimal warehouse storage, excellent palletisation and reduced truck movements on the roads
- 3 Integral ribs to withstand the challenges of modern packhouse environments

Padless Trays

With Holsorb the manufacturer has removed the need for padding offering processors potentially fewer changeovers and therefore a reduced cost base. Holsorb is an integral feature exactly designed to retain drip loss and the juices from fish in reservoirs or mini cavities within the base of the tray eliminating the need for a pad. Another key environmental benefit because less material is used in the manufacture of the tray.
